The length of cycle shown on the display or in this booklet is an estimation only and is calculated assuming standard working conditions. The actual duration can vary according to factors such as water temperature and pressure, the amount of detergent used, the amount and type of load inserted, load balancing and any wash options selected.

1) Test wash cycle in compliance with directive 1061/2010: set wash cycle 3 with a temperature of 60°C.

This cycle is designed for cotton loads with a normal soil level and is the most efficient in terms of both electricity and water consumption; it should be used for garments which can be washed at 60°C. The actual washing temperature may differ from the indicated value.

2) Test wash cycle in compliance with directive 1061/2010: set wash cycle 4 with a temperature of 40°C.

This cycle is designed for cotton loads with a normal soil level and is the most efficient in terms of both electricity and water consumption; it should be used for garments which can be washed at 40°C. The actual washing temperature may differ from the indicated value.

For all Test Institutes:

2) Long wash cycle for cottons: set wash cycle 4 with a temperature of 40°C.

3) Long wash cycle for synthetics: set wash cycle 6; with a temperature of 40°C.

Cotton Standard 20° (wash cycle **7**) ideal for lightly soiled cotton loads. The effective performance levels achieved at cold temperatures, which are comparable to washing at 40°, are guaranteed by a mechanical action which operates at varying speed, with repeated and frequent peaks.

Express (wash cycle **11**) this wash cycle was designed to wash lightly soiled garments quickly: it lasts just 15 minutes and therefore saves both energy and time. By selecting this wash cycle (**11** at 30°C), it is possible to wash different fabrics together (except for wool and silk items), with a maximum load of 1,5 kg.

Sport Intensive (wash cycle **12**) is for washing heavily soiled sports clothing fabrics (tracksuits, shorts, etc.); for best results, we recommend not exceeding the maximum load indicated in the "Table of wash cycles".

Sport Light (wash cycle **13**) is for washing lightly soiled sports clothing fabrics (tracksuits, shorts, etc.); for best results, we recommend not exceeding the maximum load indicated in the "Table of wash cycles". We recommend using a liquid detergent and dosage suitable for a half-load.

Special Shoes (wash cycle **14**) is for washing sports shoes; for best results, do not wash more than 2 pairs simultaneously.
